Welcome to an introduction to version control with Git

During two hours we will cover the basics of version control with Github and how you can use it to support your future projects. Git was made to be as simple and intuitive as possible, so its commands and principles are easy to learn. The application of them is what makes Git such a powerful tool, used by beginners and experts alike. Today, Git is the most used tool for version control and is used by many of the largest companies in the world.

This beginner event requires no previous experience in programming and is aimed towards anyone interested. The only thing you need to participate is a computer.

**Maximum number of participants/occasion:** 15

**Sign up by email to:** digilab@bibl.liu.se
